The New York Stock Exchange, a 1010data Customer, to speak at Gartner Business Intelligence Summit

June 30, 2008 -

WHAT: 1010data, a provider of high-performance database software for analyzing and managing large volumes of data, today announced that its customer, the New York Stock Exchange (NYSE), will discuss best practices for business intelligence (BI) and performance management systems at today's Gartner Business Intelligence Summit in Chicago. The Summit brings together industry analysts, vendors and end users to discuss BI in the real world.

Mark Schaedel, vice president of data products at NYSE Euronext, will be speaking on a panel entitled, "Best Practices – Leadership/BICC Case Study." Schaedel will explore the challenges and benefits of implementing BI and performance management systems to save organizations time and money. He will also discuss how the NYSE uses 1010data solutions to analyze, manage and distribute unlimited quantities of data. In fact, the NYSE uses 1010data to publish its daily quotes and trades.

Architected to handle multi-terabyte databases at a fraction of the cost, 1010data's high-performance data management architecture is almost infinitely scalable. With its on-demand BI services offerings, 1010data gives businesses the tools to lower costs and increase productivity.

About 1010data 1010data was founded in 2000 by pioneers of large-scale data systems on Wall Street. Drawing on that experience, 1010data has developed a data management platform that makes it easy to acquire, organize, manage and analyze large volumes of complex, interrelated data.
