## **Announcement: 1010data ODBC Driver Released**

Jan. 25, 2008 -- 1010data is pleased to announce the beta release of the 1010data ODBC driver. Customers have requested the ability to easily integrate custom or off-the-shelf applications with the 1010data platform using standard SQL. This capability is now available to our customers as part of our standard suite of tools.

In addition to accepting standard SQL, customers may also take advantage of extended 1010data functionality (such as time-series functions) by embedding such requests within SQL statements.

This capability complements the XML API which enables programmatic interaction with the 1010data platform by exchanging XML messages containing the native 1010data macro language.

Customers may contact the 1010data support center for more information.
